## MULTITASKING MACHINING CENTRE FROM MANDELLI

The main reference fields for Mandelli are the Aerospace and Energy Sectors characterized by hard materials and complex shapes, often requiring both milling and turning operations. The machining of rough work-pieces, usually consisting of plates to be machined from a solid or forged block and work-piece castings with high allowance rates to ensure the absence of flaws in the material, requires very stable machining centers for high stock removal during roughing operations, high dynamics and accuracy in the finishing of complex profiles... [More](#)

## METAL CUTTING, BEADING AND FORMING FROM COIL. NO NEED OF MOVING / LOADING STEEL SHEETS. AUTOMATIC UNLOAD OF THE FINISHED PARTS

Produtech S.r.l. is a company designing and producing lines for coil punching and laser cutting. It has been operating in this market for many years and its innovative models work steel, aluminium, copper and any type of metals, even pre-painted or protective-film covered ones (max. thickness: 4mm). The finished parts are automatically unloaded without any operator's intervention, allowing a considerable reduction in the production time; also, coils avoid complicated operations to cut and move sheets, thus making the working cycle visibly fluent. [More...](#)

## EQUIPMENTS TO DECOIL AND STRAIGHTEN STEEL FROM COILS

45 years of experiences and the co-operation with an always increasing number of the best manufacturers, permit to Servopresse S.r.l. to be one of the leader company on the automation field to produce equipments to decoil and straighten steel from coils.

The production range is able to handle all the coils dimensions up to max. 20 tonne of capacity, up to max. 20 mm of thickness., and up to max 2000 mm. of width.

Servopresse S.r.l. can build single machines, compact lines, special lines composed by:

Decoilers : single or double, with or without motor, with a hydraulic self-centering expansion.

Straighteners: normal or feeding straighteners, composed by cast iron drafting head, and by hardened and ground steel straightening rolls.

- Electronic rolls feeders: easy to use, with many performances to satisfy any kind of automation work, due to the use of high quality of electronic devices.
- Traditional Lines composed by decoilers, straightener to be used with a separated feeder
- Lines composed by decoilers, feeding straightener
- Special lines able to satisfy all most sophisticated working exigencies, as zig-zag feeding lines, straightener cradles, bar feeders and complete cutting lines. *More*

The project Piattaforma India has been promoted by UCIMU – Association of Italian Machine Tools Manufacturers and ASSOCOMAPLAST – Italian Plastics and Rubber Processing Machinery and Moulds Manufacturers Association. The two associations agreed on the idea that promoting a network of associations and entrepreneurs who have developed knowledge and experience on the Indian market, can be useful in favoring of new paths of development for business. The Indian companies who are interested to form JV, cooperation, technical tie up, purchase machinery etc from/with Italian companies can contact below mentioned address for any assistance:
